

With experience spanning a quarter of a century, it's no wonder A-listers and models flock in their hordes to the Parisian studio of Dr Maurice Dray. The leading gerontologist is widely respected for his ability to turn back the years using natural methods, earning him fame and recognition globally. He is perhaps most

well-known as the founder of mesotherapy and the creator of the mesolift procedure – a non-surgical treatment that prevents skin ageing by hydrating it and encouraging the natural production of collagen. And now his treatments are available in his Kensington clinic – no scalpels, no knives, no magic wand, just a stroke of genius from Dr Dray.

10-minute facelift

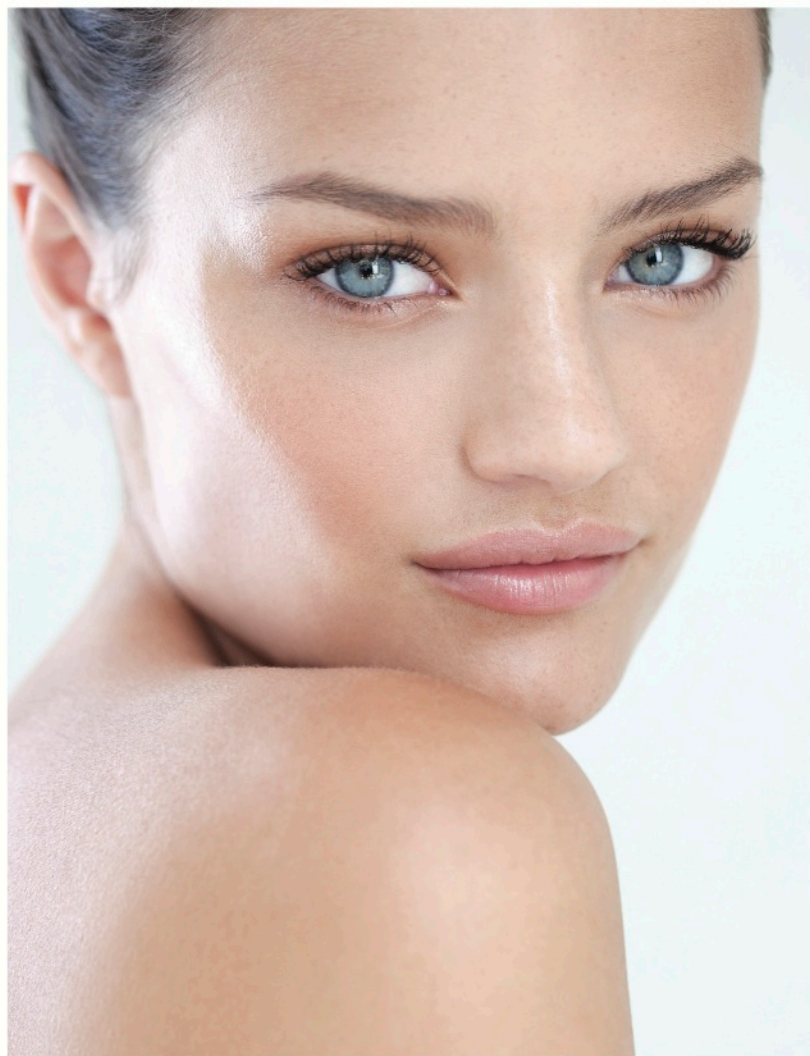

A non-invasive wonder-treatment, the 10-minute facelift has become quite the headline-hogger. Using man-made chemical injections, biphasic tricalcium phosphates (BTCs), skin is encouraged to produce collagen – connective tissue that keeps our skin naturally taut – and restructure jowls, as well as being very effective in restoring volume to the chin and cheekbones. Immediately skin becomes smooth and radiant with the best results showing eight weeks after treatment. And with effects lasting from 10 to 15 months, this age-defying treatment is a no-brainer.

Amazing face

Innovative non-invasive treatments from leading gerontologist Dr Dray are a surefire way to ensure you're looking your best for the Christmas party season

Mesolift

Dr Dray's very own innovation, the mesolift, is now an integral part of most practising cosmetic doctors' treatments. With just a series of microinjections across the face you can say goodbye to dull skin, which is instead replaced with a fresh and healthy glow. Amino acids, vitamins ABCE, hyaluronic acid and co-enzymes make up the combination of revitalising active substances, instantly resulting in a visible improvement in tone, hydration and firmness.

CROWN LIFT

Dr Dray's Crown Lift is the answer to a more natural alternative to Botox. Hyaluronic acid is injected along the hair line and just behind the ear area to pull up and pull back the temple area, creating a more youthful, fresher look without adding any volume. And with its non-allergenic and biocompatible qualities, hyaluronic acid induces no secondary effects.

MESOHAIR

Forget your two front teeth, if all you want for Christmas is hair, then Dr Dray is once again your man. Believe it or not we lose between 50 to 150 hairs on our head daily, though for years follicles will continue to replace each one. But when shedding exceeds growth, baldness may come knocking on your door. Dr Dray's customised mesohair treatment increases blood circulation, enhancing and stimulating each follicle via four to six weekly (and crucially painless) injections. A cocktail of vitamins, minerals and DHT blockers are injected directly into the mesoderm under the surface of the scalp, as close to the dying hair follicles as possible. And then the magic begins. If hair loss is attended to early, it can be halted altogether. So don't turn a blind eye...
